## PULMONARY FUNCTION TEST SPIROMETER FILTER

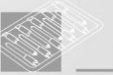

- Non-sterile intended for use during pulmonary function testing to remove and retain micro-droplets from patient breath to reduce contamination of the host device,
- also intended to function as a mouthpiece to facilitate access to the patient's respiratory system.
- - Available in 3 different sizes;
- . SFT Respiratory Function Test Mouthpiece - 28MM
- . SFT Respiratory Function Test Mouthpiece - 30MM
- . SFT Respiratory Function Test Mouthpiece - 33MM
- Bacterial and viral tests have been done by international accredited institutions, and it has been approved by clinics that it is bacteria and virus free.

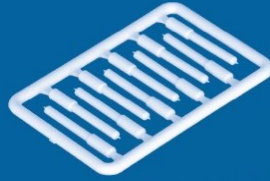

## SKIN PRICK TEST APPLICATOR

- The allergy test applicator, which is used to perform 10 tests at the same time, is disposable and sterile.
- There are 10 legs in the product and prismatic needles with 1 or multiple (8-9) ends not exceeding 1MM,
- depending on the user's request at the ends of these legs.
- It is designed to have 10 legs and to perform more than one test. The number of needles at the ends
- of the legs may vary in terms of strengthening the allergen population under the skin.
- It is sterilized with ethylene oxide.
- The distance between the legs has been designed in accordance with the standards
- in order to obtain safe test results.

## PLASTIC ALLERGY LANCET STALLERPOINT

- Aller-Tech is a disposable, sterile lancet with a cylindrical tip that prevents pain and is specially designed for allergy skin testing.
- - Produced locally from medical grade plastic.
- - It is used in discs of 10, by tearing off one by one.
- - It is sterilized with ethylene oxide.
- - It aims to minimize the feeling of pain with its low antigen consumption and design.

## ALLERGY TRAY

- You can use it with 1 or 20 different solutions in a single tray.
- It is made of medical plastic material.
- Thanks to the stoppers in our applicators and lancets, there is no overflow.
- Covered.

## VAGINAL SPECULUM

- A hand-held manual instrument intended to expand the vagina after insertion,
- typically for visual inspection of the vaginal canal and cervix and/or to perform a gynecological procedure.
- Typically consists of two long blades joined in a handle at one end that are inserted
- into the vagina in a horizontal position and then open to form an angle, or a soft-material device that, after insertion, allows viewing and access.
- Made of medical plastic. It is disposable.
- It is non-sterile
- Available in 3 different sizes;
- - Vaginal speculum small (Colour: RED)
- - Vaginal speculum medium (Colour: BLUE)
- - Vaginal speculum large (Colour: GREEN)
